

Water

Water is required wherever there is life of any kind. High or low tariff, war or peace, hard times or prosperity do not affect the individual need of it.

The advance of civilization has increased this need and brought about wonderful changes in methods of purification and production. Just how to meet the requirement and supply the water most satisfactorily has been a subject of consideration since the beginning of time. Volumes have been written on the subject of water supply. Millions of dollars have been spent in installations of water systems by which people and vegetation can be cared for properly.

The question of sufficient and satisfactory water supply is one of vital interest and universal importance. There are thousands of homes in this country equipped with private water systems which give the same advantages and conveniences that are found in the big city homes that are supplied by public water systems, but for these homes so equipped, there are many times their number that are not.

That the owners of many of these homes have not improved their water systems is due to a mistaken idea about the expense of doing so, and oftentimes because they do not know how to go about it. Right here is where we are in correct position to help you, because our experts in this particular line are equipped to advise with you on any kind of an installation you may desire, no matter whether it be for a windmill, tank and tower for domestic and stock purposes, or whether it be for a municipal or big irrigation enterprise. We will make these installations for you at surprisingly low figures, or, our men will advise you in such a manner that you yourself can install a system adapted to your needs. Come in and talk this over with us. We have engines for every purpose, and Samson windmills in any size desired.
